

Fork Positioner for Forklifts

Fork Positioner for Forklifts - A fork positioner is a device made out of top quality materials designed to be able to withstand the most challenging operations and work environments. This piece of equipment enables the one driving to be able to work the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms in order to facilitate more accurate lifting and placement in a quicker and much more effective manner.

The only one of its kind fork pocket design enables the one operating it to be able to safely sway the unit's forks without any worry of destroying the positioning cylinders. This could allow the operator the alternative to either perform independent or simultaneous blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on existing units.
